SESSION ONE PRACTICAL – INSTRUCTIONS

Now you have completed the (modified) FRAM Tutorial, we invite you to complete a short practical exercise.

For this Practical Exercise, you are asked to create a model that represents a snapshot of As-Required (Open) Software Safety Practice:

1. Read the file 'Session One Handout' which describes the process required by ARP 4754B for conducting a Safety Assessment
2. Carry out **Step Two (ONLY)** of the instructions contained in the file 'USSP Process Instructions' up to and including Task 3 (using the Visio and / or LucidChart templates provided to you electronically)
3. Export the model of the lifecycle to a pdf, and send the pdf by email to matthew.osborne@york.ac.uk

There is no time limit for this task.
